SPAN300W

Professional

The SPAN300W is a high strength, light weight, aluminium tower delivering quality and durability, at an affordable price.

All of the SPAN300W series products are in accordance with the EN1004 standard designed and manufactured. It is designed using a quality aluminium tubing and fully TIG-welded frames for added strength and safety.

It's lightweight, mobile, versatile, works at multiple heights and it's easy to transport. And all products have been tested and certified by TUV.

2 Year
Warranty

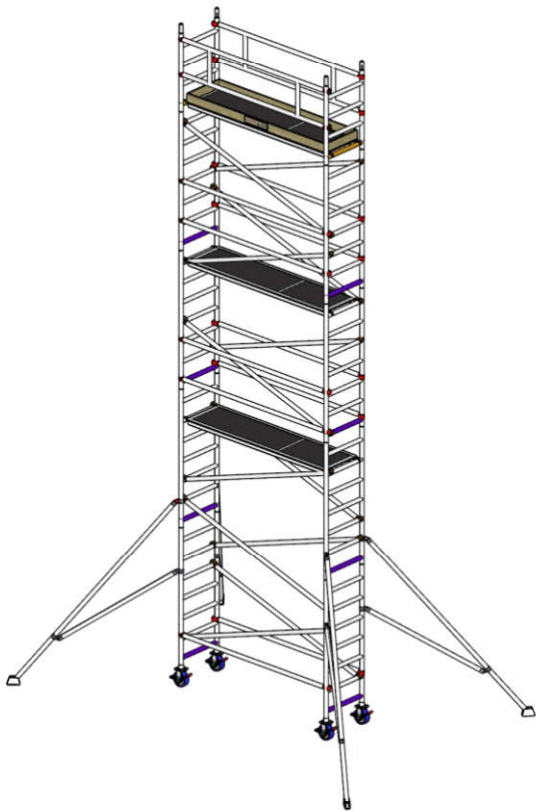

Length	2.0m / 2.5m / 3.0m
Frame Widths	0.75m (single wide) 1.35m (double wide)
Tower Loading	900kg
Platform Capacity	275kg
Working height(max)	14m (Standard DW indoor) 10m (Standard SW indoor)
Castor Size	200mm
Warranty	2 Year
Compliant with EN1004 and WAHR	

Features

SPAN300W Series

- The distance between the rungs is 300mm, It can also choose a special 45 ° or 70 ° inclined ladder
- Fluted ladder rungs for increased slip resistance when climbing
- TIG welded joints give strength and durability
- Anti-slip plywood platform available in standard and trapdoor formats
- All of the braces and stabilisers adopt cold expansion, cold pressing or cold processing technology, which is solid, durable and pressure resistant
- Adjustable Leg gives up to 400mm of adjustment for quick and easy levelling

We also produce a series of "Rib-Grip" alloy scaffold towers, glass fiber scaffolds, Ring-lock system scaffolds, low-level working platforms and related supporting products to meet your different needs.

According to the different needs of customers, as a professional supplier, we have **Sales and Rental** business together, which can build solid foundation.

SPAN300W is especially suitable for the application of construction environment, with high safety standard flexible operation, firmness, fall resistance, pressure resistance and durability.

Special Design

The picture shows a set of 10m mobile platform. It can be assembled according to the variety of construction needs.

SPAN300W Single width

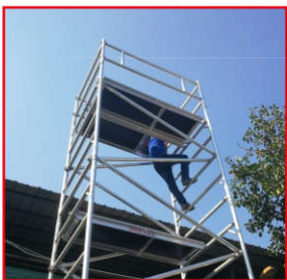

If the space is limited, our single width tower (0.73m) can help you, it is stair ideal for narrow spaces such as aisles.

As a professional manufacturer, we also produce a series of products as shown below to meet with different customers such as builders, renters or commercial facility managers.

SPAN300 Cold form Joints

SPAN400 is manufactured by non welding process which is a cold expansion and cold pressing with patented technology. This process does not change the molecular structure of materials, so the strength will not be reduced. compared to the welded frame, the strength capacity is 3 times than welded products. Therefore, the warranty of SPAN400 series can be 10 years warranty !

SPAN500W Professional

SPAN500W series products are in accordance with the EN1004 standard designed and manufactured .It is designed using quality aluminium tube with 2mm thickness and fully TIG-welded frames for added strength and safety. Especially suitable for construction sites and other harsh working environments.

TVX VX Folding

TVX has a foldable frame, which is suitable for all different types of low-level work. It is made of heavy light aluminum alloy, and has a compact structure which can be completed installation in a few seconds .With other extension accessories, it can be extended DIY up to 9 meters.

Special design project

Each construction site is different, we can design different kinds of special solutions using all standard components for your custom needs. According to the EN1004 standard, we provide professional and special-shaped mobile platform, which can be installed and disassembled quickly and moved flexibly.

Fiberglass scaffold

The fiberglass scaffold is made of by fiberglass and epoxy resin .The products have high mechanical strength, excellent insulation performance, etc characteristics. It is suitable for various live working places and high-altitude live working Industry.
